EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lee C. Wright on August 27, 2009.

Claim 1, line 3 replace "300~3000" with "300-3000"

Claim 1, line 4 replace "having" with "have"

Cancel claims 4-7

Art Unit: 1796

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Claims 1-3 are allowed.

The present invention is drawn to silica filled rubber granules wherein the granules are comprised of a co-coagulation product of rubber and silica having an average particle diameter (D_{50}) of 300-3000 μm and a weight ratio of the granules within the range of $D_{50} \pm (D_{50} \times 0.5)$ is at least 50 % by weight, and wherein the granules have a sphericity of 0.68-0.85 determined by a ratio of the major axis (D_L) and the minor axis (D_S) of the granules (D_L/D_S).

Present inventors have shown in working examples a series of silica filled rubber granules having sphericity of 0.68, 0.74, 0.75, 0.84, and 0.85. These examples are deemed sufficient to convey to one skilled in the art that the inventors, at the time the application was filed, had possession of the claimed invention, namely, granules having a sphericity of 0.68-0.85.

Görl *et al.* (U.S. 6,433,064) represents the closest prior art. The reference discloses finely divided, pulverulent rubber containing silica filler formed by co-coagulation of aqueous suspension of silica and rubber latex. The particle size of rubber particles is in the range between 0.5 to 2 mm (500 to 2000 μm), and rubber powders according to the invention exhibit narrow particle size distribution shifted to smaller particle sizes. The reference does not teach a process in which co-coagulation product of rubber and silica has a sphericity of 0.68-0.85, as recited in instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1796

Priority

The prior art made of record on the accompanying PTO-892 but not relied upon is considered pertinent to the Applicant's disclosure. The references have been cited to show the state of the art with respect to silica filled rubber product.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rip A. Lee whose telephone number is (571)272-1104. The examiner can be reached on Monday through Friday from 9:00 AM - 5:00 PM.
